Summary

I'm Aaditya Kandpal, a 20-year-old frontend developer with hands-on experience in building and managing websites using HTML, CSS, JavaScript, WordPress, and Shopify. I focus on creating clean, responsive, and user-friendly websites that are both functional and visually effective. In addition to development, I have experience in graphic design and social media management, which helps me understand the complete digital workflow — from design to user engagement. I'm continuously working on improving my technical skills and gaining more real-world project experience to strengthen my expertise.

Strengths

- I have a strong foundation in frontend technologies (HTML, CSS, JavaScript)
- I can handle complete website workflows including design, development, and management
- I understand both technical and creative aspects (development + design + social media)
- I learn quickly and adapt to new tools and platforms
- I pay attention to design and user experience details

Weaknesses

- I am still building real-world project experience and portfolio depth
- I sometimes spend too much time perfecting design details
- My advanced JavaScript skills are still developing
- I have limited experience working in professional team environments

Skills

FrontEnd (HTML, CSS & JS)

Graphic Design

Website Management

Social Media Management
